PRESS RELEASE MESSAGE:

December 2004

ProPure AS wins Statoil's Chief Executive's HSE Price.

(work for zero harmful discharge to the sea)

ProPure wins the Statoil's Chief Executive's HSE 2004 Price for its contribution for reaching the goal of zero harmful discharges to the sea on mature fields by 2005.

ProPure developed a mixing technology that cuts consumption of hydrogen sulphide scavenger by 20-30 percent. This technology is also used to inject condensate in the CTour concept for produced water treatment.

There has also been a considerable commitment to research into acquiring greater knowledge of the environmental impact of discharges and contributed to the development of the CTour technology for cost effective treatment of produced water. CTour represents the most important "zero discharge" measured on Statfjord, where the first facility has been installed on the C platform during 2004.

The Jury's assessment

Work on zero harmful discharges to the sea is an important and demanding priority area. Purposeful and systematic efforts have been made over a long period in time to develop and adopt new technology through extensive in-house and external cooperation.

The results now emerging deserve recognition and are also vary valuable for other parts of Statoil's operations. Creativity and determination have been displayed, and the work done is crucial for the oil company's ability to continue operating mature fields in an environmentally satisfactory manner.
