PRESS RELEASE MESSAGE:

February 2005

ProPure' wins Spotlight on new technology award 2005.

ProPure has been selected as one of the winners

ProPure AS has been selected as one of the award winners for the Spotlight on new Technology Program. ProPure is recognized for its innovative technology on Off-shore H2S removal at the Offshore Technology Conference (OTC), scheduled 2-5 May at Reliant Center at Reliant Park in Houston.

"In its second year, the spotlight on new technology program continues to serve as a stage to highlight the most innovative and significant offshore developments during the year" said Rod Allan, OTC.05 Chairman. (Red.) These companies demonstrated the increasing technical edge that is required to explore in deeper waters. The H2S scavenging system recognized in this years spotlight program will help bring off-shore development to more efficient production and environmentally friendly exploration of oil & gas in the industry.

Submission for Spotlight on new Technology had to meet four criteria: new and innovative, proven, broad interest and significant impact. ProPure will be recognized on the exhibition floor and in the registration area at this years conference, and will also be honoured during a presentation on Monday, 2 May 2005, where Rod Allen will present them with an award.
